CHTN BIBLIOGRAPHY

1987- FEB 2019

Abstracts and meeting presentations are not included in this bibliography.

PMCIDs are indicated where available. If unavailable at the time of update they are marked UA.

Since 2001, the bibliography has been generated by electronic searches that identify the CHTN as a source of human tissues used in the research together with the results of surveys carried out by Divisions when and if these were provided to Dr. Hunter. It should be noted most investigators who respond to the surveys or contact the CHTN regarding publication also credit the CHTN in the publication.

The publications record cannot be analyzed reliably as a function of time. For example, the Coordinating Committee of the CHTN decided that publications by the principal investigators of the CHTN should be included for the last grant period (2012-2019), whether or not they mentioned the CHTN. From 1987 to 2012, publications by the Principal Investigators and CHTN personnel were not included unless the reported research utilized tissues supplied by the CHTN or pertained to Tissue Banking.

The publications record for 2012-2019 includes searches for Tissue Microarrays prepared/distributed by the Midwestern Division.

The publications record for 2012-2019 does not include <u>all</u> publications from the Children's Oncology Group. The Pediatrics Division should indicate if any such publications should be included in the overall CHTN Bibliography.

From 1997 to 2001, the bibliography was prepared by a company who used a strategy in which a list of all publications by investigators who used CHTN tissues was generated. The company assumed that they could the query the investigators to select the relevant publications. However, this process broke down due, in part, to a low response rate from investigators and the labor involved in follow-up. Issues in follow-up included the considerable lag time between provision of tissue and publication of the data (that is, the shipping data for any one year does not align with the publication record for that or several previous years). The bibliography was culled to remove publications that did not utilize human tissues or where the source of human tissues was provided in the publication and the CHTN was not included but the accuracy of this portion of the bibliography is questionable.

From 1987 until 1997, the bibliography was based on self-reporting through surveys of the investigators who utilized tissues. As journals post full-length articles for this time period, searches have indicated some additional publications.

2019
(Partial Year through Feb)
